

Give your business its hours back.

WORKFLOW AUDIT

Prepared for:	[Client business name]	Date:
Prepared by:	[Your name] · Nudge	[Date]

1. Business Snapshot

- **Business:** [name, industry, team size]
- **Tools currently in use:** [CRM, scheduling tool, email, spreadsheets, etc.]
- **Goal for this audit:** [what they said they wanted looked at]

2. Workflows Reviewed

The processes below were walked through during the audit call/observation.

Workflow	Current process	Time/week	Pain points
[e.g. Customer inquiries]	[how it's done today]	[hrs]	[delays, errors, etc.]
[Workflow 2]	[...]	[hrs]	[...]
[Workflow 3]	[...]	[hrs]	[...]

3. Where Time & Money Are Leaking

Plain-language summary of the biggest findings — written for a business owner, not a technical audience.

- **Finding 1:** [e.g. “Customer questions are answered manually, one at a time, even though 70% are the same 5 questions.”]
- **Finding 2:** [...]
- **Finding 3:** [...]

4. Recommended Fixes

Ranked by impact vs. effort — highest-impact, lowest-effort items first.

Priority	Recommended fix	Approach / tool	Setup time	Est. time saved/wk
1	[fix]	[tool/approach]	[days]	[hrs]
2	[fix]	[...]	[...]	[...]
3	[fix]	[...]	[...]	[...]

5. Estimated Return

Current cost of the problem	<i>[hrs/week × hourly value = \$X/month]</i>
Projected time saved after fix	<i>[hrs/week]</i>
Estimated monthly value	<i>[\$X/month]</i>
Payback period on implementation cost	<i>[X weeks/months]</i>

Use conservative estimates here — under-promising and over-delivering builds the case study you need far more than an inflated number does.

6. Recommended Next Step

Based on this audit, the recommended next step is:

- **Implementation package** — *[fix #1 above], estimated timeline [X weeks], investment [\$X].*
